Waterwash Spray Booth DS-56-2

A spray booth is a necessity for every spray painting operation to:

- Effectively Extract material overspray from the work area.
- Control Environmental Emissions through the combination of appropriate Filtration Media and correctly specified Ductwork and Termination Cowl.
- Complies with legal Health and Safety requirements as stipulated in Control of Substances Hazardous to Health.

FEATURES:

- Our Waterwash Spray Booths are ideal for medium/high production applications.
- A water curtain on the booth face catches initial overspray. Paint laden air is drawn by an exhaust fan, through ducts where water jets efficiently scrub the air.
- The oversprayed paint is contained in the water which cycles back to the tank and clean air is exhausted to atmosphere.
- Standard Modular Range gives high quality production and easy installation.
- Bespoke range for specific requirements such as additional height or dividers.
- Technical specifications fully meet EPA and CE accreditation requirements.
- Airflow through spraying area is 0.7m / sec as specified by EH9 guidelines.
- Externally mounted (out of air-stream) motors with belt driven impellers.
- Option for Lighting inside booth canopy behind wired safety glass.

OPTIONAL SERVICES:

- Delivery to your site.
- Mechanical Assembly and Installation.
- Supply and installation of Ductwork and Cowl.
- Electrical Installation.

Note : These products provide optimum and safe performance only when used in accordance with manufacturer's instructions, with suitably trained operators, and when provided with adequate recommended power requirements.
