Eductomatic Spot Blaster DS-9-2

Eductomatic with Dust
Collection Bag and
Standard Head

Picture above shows optional work heads

Our Spot Blasting Tools are ideal for cleaning of small areas such as welds.

The Eductomatic is our smallest closed-circuit tool, weighing around 3 kg.

Dust and abrasive are trapped by the combination of the rubber boot around the blast nozzle, a vacuum, and a cotton bag for exhausting air.

The operator controls blasting and recovery with a single trigger handle which has 2 stages for vacuum only or vacuum / blast. The hopper contains the abrasive and a venturi draws the abrasive into the airstream and propels it out the nozzle. The head swivels to allow blasting at any angle.

Optional heads can be fitted to allow a vacuum seal on corners or edges.

SPECIFICATION:

- Media - designed for use with recyclable abrasives such as iron / steel grits.
- Blast Pattern Size - around 30 mm
- Weight - 3 kg

AIR REQUIREMENTS:

- Requires minimum of 90 cfm at 90 psi for best performance
- Air supply hose of 3/4 id required (1/2 id basic minimum)
- Air should be Filtered to prevent moisture causing abrasive blockages.

Note : These products provide optimum and safe performance only when used in accordance with manufacturer's instructions, with suitably trained operators, and when provided with adequate recommended power requirements.
