### SAFETY DATA SHEET

## GLASS BEAD

Glass Beads Abrasive with their hardness and spherical form can remove impurities and metal oxides without damaging the treated surfaces. Glass does not react chemically with other materials so that the micro-beads do not create any corrosion on the treated surfaces with no deposits of foreign substances.

- Persons with a history of skin sensitisation problems should only be employed in processes in which this product is used under appropriate medical supervision.

### Engineering Measures:

Provide adequate ventilation. Where reasonably practicable this should be achieved by the use of local exhaust ventilation and good general extraction during process use.

### Occupational Exposure Standards:

- |                    |  |
|--------------------|--|
| 1. Total dust      | Less than 10 mg per cubic metre 8h TWA |
| 2. Respirable dust | Less than 4 mg per cubic metre 8h TWA  |

### Personal Protection:

All Personal Protective Equipment, include Respiratory Protective Equipment, used to control exposure to hazardous substances must be selected to meet the requirements of the COSHH Regulations.

### Respiratory Protection:

None except where used in applications that would cause dust, and then appropriate respiratory protection should be used depending on the application.

### Hand Protection:

When skin exposure may occur, advice should be sought from glove suppliers on appropriate types. Barrier creams may help to protect exposed areas of the skin but are not substitutes for full physical protection.

### Eye Protection:

Eye protection designed to protect against exposure which should be an EC approved helmet in blasting operations.

### Skin Protection:

Cotton or cotton/synthetic overalls or coveralls are normally suitable. Grossly contaminated clothing should be removed and the skin washed with soap and water or a proprietary skin cleaner.
