

EXTRACTION FILTERS

The demand for efficient air filtration systems in industry has never been greater. Stringent specifications for clean, pollution free environments have to be maintained, and at the most economical cost. We supply a range of filter types for your spray booth, powder booth, or blast room extraction.

ORDER CODES

Code	Description	Typically use	Size
PAINTSTOP	Paintstop Roll is design to collect paint overspray in spray booths. Constructed from continuous filament glass fibres with an open weave pattern. Recognised by its green and white colour.	Spray Booth Extraction	1m x 20m
PST290	A dual stage synthetic product often used as an alternative to paint stop.		1m x 20m
B207229	Pleated Spray Booth Filter.		0.9m x 9.2m
B207229SEF	High efficiency version of above with additional synthetic media.		0.9m x 6.0m
ORANGETAG	Combination filter with layered card and a synthetic backing.		1m x 10m
FDC	Pleated Cartridge Filters - Typically used for filtering dusts. Their pleated construction allows them to be very compact relative to the amount of airflow passing through them.	Shot-blasting or Powder Coating extraction dusts	Variety of sizes to suit application.
