REMOTE CONTROL SYSTEMS

A remote control system, popularly known as a 'Deadman' system, is essential for safe and convenient operation of a blast vessel. All our blast pots are fitted with this system. In operation a 'Deadman Handle,' attached to the blast hose, is held closed by the operator to keep the blast process operating. When the operator releases the handle (intentionally or in the event of an accident) the signal is stopped via control hoses to a valve on the blast vessel. This depressurises the machine and stops the blasting process.
