GRACO XM – 2K SPRAYER

XM Unit (left), XTR Gun (middle), and Optional Heater, and Mix Manifold (right)

The trend for the protective coatings industry is toward high solids, 2 component coatings. Formulated with less solvent. These coatings reduce VOC emissions and speed production with faster cure times, and tough protective qualities.

The Graco XM machine is designed to accurately feed, meter, and mix the paint and hardener at the correct ratio before pumping the mixed material to the spray gun.

BENEFITS :

- Reduces material costs - only mix as much material as you need to spray.
- Provides consistent material quality to reduce rework.
- Materials are proportioned by precision pumps and mixed on-ratio at the mix manifold.
- Change mix ratio via Digital Display - from 1:1 to 10:1
- Ideal where mix ratios may need to be changed regularly for each job.
- Provides real time display of pressure, temperature, ratios, and flow.

TYPICAL APPLICATIONS :

- Tanks, Pipes, Marine / shipbuilding, Bridges, Wind towers, Railcars , Water towers, Wastewater treatment, Structural steel, Refineries, Roof coatings.
- Coatings - Environmentally-friendly high solids coatings, with little or no solvent.
- Hybrid polyurethanes, Epoxies, high solids coatings.

OPTIONS AND CUSTOMISATION :

Select your exact system - no more, no less - to complete your jobs accurately and reliably. Options include :

- Material Heaters, Remote mix manifold, Agitators, Solvent Flush pumps, Feed pumps or hoppers.
