Equipment Group

Blast & Vac Heads

Our Blast & Vac and Blast & Recovery systems can be used with any of our range of heads.

Each head is connected to the blast hose and vacuum hose and the head contains the blast media and dust during the cleaning process. A circular brush or pair of brushes are fitted to the work head and this is held in contact with the work surface. The blast nozzle is contained within the head and is fitted with a centre tube to protect the blast head (except the 90deg head).

All heads are fabricated from aluminium and can be rubber lined to give a longer life.

Approximate Height from End of Brush to Nozzle Retainer are shown below for guidance.

90 Degree Angled Head
For access to narrow spaces
Height = 130 mm

No 2 Head
Compact head for use in tight spaces
Height = 180 mm

No 3 Head
Standard most commonly used head
Height = 320 mm

No 5 Head
Larger head with wider blast pattern
Height = 400 mm

No 6 Head
Largest head with flexible base and wheels
Height = 560 mm
